Until the 19th century, linear algebra was introduced through systems of linear equations and matrices.In modern mathematics, the presentation through vector spaces is generally preferred, since it is more synthetic, more general (not limited to the finite-dimensional case), and conceptually simpler, although more abstract.. A vector space over a field F (often the field of the real numbers ...

In mathematics, especially functional analysis, a normal operator on a complex Hilbert space H is a continuous linear operator $N : H \rightarrow H$ that commutes with its hermitian adjoint N^* , that is: $NN^* = N^*N$.. Normal operators are important because the spectral theorem holds for them. The class of normal operators is well understood. Examples of normal operators are
